1.0 Purpose of this document

To help ensure that development activity results in the community obtaining public benefit, developers are required to undertake public domain improvements in association with their developments. Lake Macquarie City Council has developed Streetscape Master Plans to illustrate requirements for public domain works within the City’s Town Centres.

The Streetscape Master Plans provide site analysis and contextual information to assist designers prepare detailed site plans for the public domain. This document provides detailed technical information and specifications to assist in the preparation of design and construction documentation for public domain works.

These Guidelines are applicable to the extents shown in the Streetscape Master Plan applicable to the relevant town centre. Heritage areas and precincts have their own distinct character derived from their unique history. Selections and treatments contained in these Guidelines are not applicable to heritage areas, seek guidance from Councils Development Planner – Heritage Focus where streetscape works are proposed in areas identified as Heritage Conservation Areas and Heritage Precincts.

Designers should also refer to Lake Macquarie City Council’s Engineering Guidelines and Landscape Design Guidelines to ensure designs and documentation are prepared to Council’s standards.

The Streetscape Technical Guidelines aim to:

- Ensure public domain treatments are consistent with the adopted Master Plan design concepts for each Town Centre;
- Ensure assets in the public domain are of a suitable quality.
2.0 Planning Context

1. Lifestyle 2030.
   Long term direction for the overall development of the city.
   Adopted 11 March 2013

2. Lake Macquarie Local Environmental Plan 2014 (LMLEP 2014)
   Land use zones and permissible uses within Lake Macquarie.
   Effective 10th October 2014

3. Lake Macquarie Development Control Plan (LMDCP 2014)
   General guidelines for development within Lake Macquarie
   Effective 10th October 2014

4. Area Plans
   Specific guidelines for development within town centres

5. Heritage Conservation Areas and Heritage Precincts
   Specific guidelines for development within identified heritage areas and precincts.
   Materials selections and layouts within these Guidelines do not apply. Seek guidance from Council’s Development Planner - Heritage Focus.

6. Streetscape Master Plans
   Streetscape planning within town centres.

7. Streetscape Technical Guidelines
   Materials selections performance requirements, installation and construction requirements for town and neighbourhood centres.

Guidelines to the DCP
   For example
   - LMCC Standard drawings
   - Landscape Design
   - Engineering Parts1-5
   - Smart City Emerging Technology
   - CPTED
   - Heritage
   - Non-Discriminatory Access
   - Tree Preservation
   - Water Cycle

Primary guiding document for development of local plans, regulations and guidelines

Legal instruments to control development

Council’s requirements for design and implementation of works in the public domain
3.0 How to use this document

Read this document in conjunction with the Streetscape Master Plan relevant to the development site.

This document may also direct designers and specifiers to other Council Guidelines, Policies and Standard Drawings. All referenced documents are available on Council’s website or through contacting Council's Development Planners.

Failure to meet the requirements outlined in both the Streetscape Master Plans and associated Technical Guidelines may result in works being rejected by Council.
4.0 Design Documentation

Consultant Requirements
Lake Macquarie Development Control Plan (LMDCP) 2014 outlines consultant and documentation requirements for landscape design relevant to each land use zone. Public domain and high profile locations such as town centres are classed as Landscape Category 3 development and landscape documentation must be undertaken by a qualified and experienced Landscape Architect. The Landscape Design Guidelines provide further requirements for development classed as Landscape Category 3.

Landscape design shall be supported by the engagement of suitability qualified and experienced engineers to carry out structural and civil detailing. All documentation shall be fully coordinated and integrated with the building design.

Design detailing
This guideline provides information about typical treatments only. Additional site-specific design detailing is required to resolve the unique circumstances of each site. The designer is responsible for checking and customising all detailing and specifications to ensure relevance for the specific site context.

Compliance with Council’s Standard Drawings
Council has developed a set of standard details that describe the minimum requirements for works within the public domain. The Streetscape Technical Guidelines may reference these standard details, however it is the designer’s responsibility to ensure that all construction details are adapted to suit specific site and project requirements.

Council’s standard details are available from council’s website under the Development Control Plan (DCP) Landscape and Engineering Guidelines:

- Roadway standard drawings
- Drainage standard drawings
- Landscape standard drawings
- Miscellaneous standard drawings

Survey documentation
Numerous Survey Marks may exist within town centres, such as Permanent or State Survey Marks (SSMs), buried reference marks and kerb drill hole and wings. These must be located by a Registered Surveyor prior to being destroyed or covered and must be maintained in accordance with the requirements of NSW Department of Land and Property.

Prior to the commencement of any works affecting survey marks, a “Plan of Survey Information” is required to be prepared by a Registered Surveyor and lodged at the NSW Department of Land and Property Information.

Note: The Surveying Act 2002 prescribes penalties for disturbance or removal of permanent or state survey marks.
5.0 Construction Management

These Streetscape Technical Guidelines require developers, consultants and contractors to undertake inspections with a representative of Council and to provide submissions to such representatives.

Nominated hold points, inspections and submissions must be included in the design and construction documentation for all works in the public domain. Inclusion of such measures in these guidelines, and incorporating them into project specific documentation, allows developers, consultants and contractors to:

- recognise Council’s expectations and requirements;
- budget and program such requirements at project initiation.

Hold points, inspections and submissions

Hold points, inspections and submissions enable Council to be certain that public domain assets meet the quality specified in the approved documentation, and that such assets are installed to meet the performance requirements specified in approved documentation.

Hold points and inspections may occur during set-out of streetscape items, during excavation and footing pours, and prior to the installation of items.

Submissions may include warranties on proprietary components, certifications that items meet required standards, and reporting on maintenance, defects and replacements and rectification works.

Practical Completion

For works installed in the public domain, submission of a Landscape Compliance Report may be requested. Such inspections and reporting is critical to outline any minor defects, which must be rectified, and any specific landscape maintenance requirements during the maintenance period.

For detailed information and checklists relevant to compliance of streetscape elements at practical completion, refer to the Landscape Design Guidelines.

Defects Liability and Maintenance

After practical completion, a Landscape Rectification Report may be requested to ensure that any necessary works identified in the Landscape Compliance Report have been carried out and to provide evidence that an appropriate level of landscape maintenance is being performed.

For detailed information and checklists relevant to compliance of streetscape elements during the Defects and Liability and Plant Establishment periods, refer to the Landscape Design Guidelines.
Asset Handover
For works installed in the public domain, a site inspection with a representative of Council is required prior to Council accepting responsibility of the assets. Submission of a Handover Report may also be requested.

Such inspections and reporting are critical to:

- Enable Developers, Consultants and Contractors to evidence they have met the approved documented requirements agreed on through the development consent process;
- Prevent Council from having to divert resources to rectify or unreasonably maintain poorly selected and installed assets.

For detailed information and checklists relevant to Asset Handover of streetscape elements, refer to the Landscape Design Guidelines.
### 6.0 Specification Guidance for Site Establishment and Preliminaries

#### Construction in the Public domain

<table>
<thead>
<tr>
<th>Location</th>
<th>To all public domain works located within the boundaries of Council’s Streetscape Master Plans and subject to these Technical Guidelines.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Positioning</td>
<td>Confine all works within the defined and approved site boundaries.</td>
</tr>
</tbody>
</table>

#### Access

- Ensure that appropriate barriers, signage and pedestrian safety measures are put in place before work commences.
- Where public access is diverted, temporary ramps and walkways must be installed with compliance to relevant safety standards.

#### Construction Traffic Control

- Manage all site deliveries and subcontractors vehicles during construction to avoid damage to finished pavements, planting and installed furniture items.
- Ensure there are no vehicle movements on finished pavements not designed for vehicle loadings.
- All traffic management shall be undertaken in accordance with AS1742.3 and the the RMS Traffic Control at Worksites Manual (the Manual). This Manual contains standard TCPs for a variety of situations. Where a standard TCP is not suitable, a ‘site-specific’ TCP shall be developed and implemented in accordance with the Manual.

#### Environmental Sustainability

Council is committed to making Lake Macquarie a sustainable city with healthy ecosystems. Construction works in the public domain can support this commitment with the following measures.

- **Relevant Standards and Codes**
  - NSW Work Health and Safety Act 2011
  - AS4970 Protection of Trees
  - AS4373 Pruning of Amenity Trees
  - Lake Macquarie City Council’s Engineering Guidelines – Part 2 - Construction
  - Lake Macquarie City Council’s Erosion Prevention and Sediment Control Guideline
  - Landcom’s ‘Blue Book’ (Managing Urban Stormwater Soils and Construction)
  - Lake Macquarie City Council Noise Control Policy
  - Lake Macquarie City Council’s Environmental Management Plan for Contaminated Land in Council’s Care and Control - Procedure
  - AS1742.3 Traffic Control devices for Works on roads

- **Pedestrian Control**
  - Ensure that appropriate barriers, signage and pedestrian safety measures are put in place before work commences.

- **Environmental Sustainability**
  - Council is committed to making Lake Macquarie a sustainable city with healthy ecosystems. Construction works in the public domain can support this commitment with the following measures.

- **Access**
  - Ensure that appropriate barriers, signage and pedestrian safety measures are put in place before work commences.
  - Where public access is diverted, temporary ramps and walkways must be installed with compliance to relevant safety standards.

- **Construction Traffic Control**
  - Manage all site deliveries and subcontractors vehicles during construction to avoid damage to finished pavements, planting and installed furniture items.
  - Ensure there are no vehicle movements on finished pavements not designed for vehicle loadings.
  - All traffic management shall be undertaken in accordance with AS1742.3 and the the RMS Traffic Control at Worksites Manual (the Manual). This Manual contains standard TCPs for a variety of situations. Where a standard TCP is not suitable, a ‘site-specific’ TCP shall be developed and implemented in accordance with the Manual.

- **Erosion and Sediment Control**
  - ESC measures must be in accordance with approved plans and planning consents.
  - Where works have planning approval under State Environmental Planning Policy- Infrastructure, ESC measures must be in accordance with the ‘Blue Book’. Refer all queries to Councils Erosion and Sediment Control officer.

- **Nuisance**
  - Adhere to specified approved work hours.
  - Prevent undue noise or light spill from construction activity.

- **Soil contamination**
  - Contaminated or potentially contaminated land should be managed in accordance with the NSW Contaminated Land Management Act (1997), State Environmental Planning Policy (SEPP) 55- Remediation of Land and associated guidelines and Lake Macquarie City Council’s Procedure - Management of Contaminated or Potentially Contaminated Land where soil contaminants are reasonably suspected to be present or are uncovered through the course of works on public land under Council’s care and control.

- **Waste**
  - All construction waste must be removed on completion of works, and disposed of at a licensed waste facility.
  - Make good site as soon as practicable.

#### Performance Criteria

- **Quality Assurance**
  - All works in the public domain will be carried out in accordance with approved project plans and planning consents.
  - The most current version of approved plans must be available on site for reference during work hours.
  - All substitutions shall be approved by Council’s Project Manager prior to ordering. Provide adequate notice to maintain the option of rejecting substitution proposals.
  - All works shall be undertaken/supervised by contractors holding a current endorsed individual contractor licence or qualified supervisor certificate relevant to the class of work being undertaken.

- **Vegetation Protection**
  - All vegetation to be retained must be protected in accordance with AS4970 Protection of Trees on Development Sites.
  - All pruning works to comply with AS4373 Pruning of Amenity Trees.
  - See Protection – Existing Trees for detailed guidance.

- **Work, health and Safety**
  - All works shall be undertaken/supervised by contractors holding a current endorsed individual contractor licence or qualified supervisor certificate relevant to the class of work being undertaken.

- **Utilities and existing infrastructure**
  - All works shall be undertaken/supervised by contractors holding a current endorsed individual contractor licence or qualified supervisor certificate relevant to the class of work being undertaken.

- **Installation**
  - Contact Council’s nominated Project Officer to undertake inspections and receive submissions specified for each streetscape element in these guidelines, and as noted on Council’s relevant Standard Drawings.
  - Provide sufficient notice to allow the nominated Council Project Officer to attend all specified inspections prior to executing the works, and to review all supplied submissions prior to placing orders and executing the works.

- **Relevant Standards and Codes**
  - NSW Work Health and Safety Act 2011
  - AS4970 Protection of Trees
  - AS4373 Pruning of Amenity Trees
  - Lake Macquarie City Council’s Engineering Guidelines – Part 2 - Construction
  - Lake Macquarie City Council’s Erosion Prevention and Sediment Control Guideline
  - Landcom’s ‘Blue Book’ (Managing Urban Stormwater Soils and Construction)
  - Lake Macquarie City Council Noise Control Policy
  - Lake Macquarie City Council’s Environmental Management Plan for Contaminated Land in Council’s Care and Control - Procedure
  - AS1742.3 Traffic Control devices for Works on roads
Protection - Existing Trees

Location
To all instances where existing trees are required or desired to be retained, including trees on neighbouring land where works will have an impact.

Positioning
- The extent of the Tree Protection Zone (TPZ) is to be determined by the project Arborist in accordance with AS4970.
- AS4970 provides a calculation for determining the required TPZ, and also requires a TPZ should not be less than 2m nor greater than 15m (except where crown protection is required).

Equal Access
Retained trees shall not encroach into accessible paths of travel. If required, trees must be pruned to ensure that a vertical clearance of 2000mm is maintained along all accessible paths of travel 2000mm in accordance with AS1428.1 and AS1428.2.

Environmental Sustainability
The retention of established trees is an objective for development in both Business and Residential zones under the LMCC DCP2014. Established trees with a sound structure provide many ecosystem benefits including urban amenity, microclimate, scenic quality, air and water quality, wildlife habitat, wind protection and social and psychological values. Retention of trees can significantly enhance new development by immediately providing the above mentioned benefits.

Performance Criteria
- All protection measures shall be in accordance with the approved development plans prepared by a Level 5 consulting Arborist, and in accordance with AS4970 Protection of trees on construction sites.
- Install protection measures at site establishment phase and prior to any machinery or materials arriving on site.
- Tree Protection Zones (TPZs) are to be enclosed by fencing with signage in accordance with AS4970 to advise site workers that the area is a tree protection zone.
- Tree protection measures are to remain in place for the duration of the works, with selective protective measure removed as necessary to complete the works.
- Where access is required within the TPZ, undertake protective measures in accordance with AS4970 to provide protection from:
  - Compaction and excavation of tree root systems
  - Mechanical damage to the tree trunk and canopy
- All works undertaken within the TPZ shall be supervised by the project Arborist.

Installation
- Conduct a pre-construction meeting to introduce tree protection measure requirements to site managers and contractors.
- Tree protection measures, fencing and signage to be installed in accordance with AS4970 and project specific Tree Protection plans (if applicable) prior to construction works commencing.

Quality Assurance
- All tree removal and pruning works are to be carried out by suitably qualified Level 3 Arborist.
- A suitably qualified Level 3 Arborist shall be appointed to supervise:
  - The installation of all protection measures;
  - All works undertaken within the TPZ.

Relevant Standards and Codes
- AS4970 Protection of trees on construction sites
- AS4373 Pruning of amenity trees
- AS1428 Design for Access and Mobility Suite

Standard Drawing Reference
LSD-SPEC-01 Typical Tree Planting

Practical Completion
A Level 5 Consulting Arborist shall be appointed to assess all retained trees and report recommendations for any remedial actions required.

Maintenance and Establishment
- The TPZ shall be maintained by mulching, watering and weed removal in accordance with AS4970.
- The project Arborist shall inspect and certify that all remedial works identified at practical completion have been undertaken.

Asset handover
A copy of the Arborists reports from Practical Completion and Rectification/Remedial works certifications shall be supplied to Council’s representative at Asset Handover stage.
7.0 Neighbourhood Centres Typical Streetscape Layouts

7.1 Neighbourhood Centres - Street treatment - Typical layout 12
7.2 Neighbourhood Centres - Corner treatment - Typical layout 13
7.3 Neighbourhood Centres - Driveways and Transition to surrounding streets - Typical layout 14
Street treatment - Typical layout

Feature strip of exposed aggregate concrete pavement to back of kerb.
Colour, aggregate and finish as specified in the Neighbourhood Centres Streetscape Technical Guidelines.
Refer to Neighbourhood Centres - Corner treatment - Typical layout.

Typical joints shown to illustrate that isolation, control and expansion joints align with the pavement treatments. Landscape architect to coordinate joint layouts with the pavement engineer. Refer to UMCC Standard Drawing EG22-301 for joint requirements.

Main Body pavement: standard concrete as specified in the Neighbourhood Centres Streetscape Technical Guidelines.

Feature strips of exposed aggregate finish to border tree pits and extend to property boundary.

Where obstacles intrude into the clear path of streets, provide directional indicators around the object. Refer to AS1428.4 and Austroads Guide to Traffic Engineering practice PART 6A, Pedestrian and Cycle Paths.

Pavement markers as specified in the Neighbourhood Centres Streetscape Technical Guidelines to delineate outdoor dining areas.

Footway-dining in accordance with Council’s Footway Dining Procedure.

Drainage grate where required for access to gutter flow path under grate type as specified in the Neighbourhood Centres Streetscape Technical Guidelines.

Pavement treatment to extended width footways and kerb extensions to match main body pavement.

Align furniture items with the edge of the feature strip to ensure furniture items do not intrude into the clear path of travel, and meet offsets from back of kerb as specified in the Streetscape Technical Guidelines and Landscape Standard Drawings.

Tree planting, refer to UMCC Standard Drawings - Landscape - LDS-PLA-07 Tree in Pavement. Ensure trees are located clear of overhead services and awnings.

Bike parking, compliant with AS2890.3(current)

TYPICAL STREET LAYOUT
Scale 1:80

This drawing is typical only and requires site-specific documentation to be submitted for planning approvals.
Corner treatment - Typical layout

- Feature strip of exposed aggregate concrete pavement to be laid to be consistent with the surface treatment specified in the Neighbourhood Centres Streetscape Technical Guidelines.
- Install tactile ground surface indicators at kerb ramp crossings, TGS29 type, as specified in the Neighbourhood Centres Streetscape Technical Guidelines. Layout and install TGS29 in accordance with AS1428.4.
- Kerb ramp treatment: standard grey concrete. Refer to the Neighbourhood Centres Streetscape Technical Guidelines for concrete requirements. High ramp with the direction of travel to kerb ramps on the facing side of the road.

**TYPICAL CORNER LAYOUT**

Scale: 1:30

This drawing is typical only and requires site-specific documentation to be submitted for planning approvals.
Driveways and Transition to surrounding streets - Typical layout

- Tree planting, refer to LMCC Standard Drawings: Landscape. LBD-PLA-07 Trees in Pavements. Ensure trees are located clear of overhead services and settings.
- Permeable pavers as specified in the Neighbourhood Centres Streetscape Technical Guidelines.
- Painted strip of exposed aggregate finish to border tree pits and extend to property boundary.
- Typical joints shown to illustrate location, control and expansion joints align with the pavement beam orientation. Landscape architect to co-ordinate and align with the pavement engineer. Refer to LMCC Standard Drawing ES2D-031 for joint requirements.

**TYPICAL DRIVEWAY AND TRANSITION TO SURROUNDING STREET**

*Scale: 1:50*

This drawing is typical only and requires site-specific documentation to be submitted for planning approvals.

1. Ensure the diagram is accurately scaled.
2. Incorporate all relevant project specifications.
3. Review local construction codes and regulations.
4. Coordinate with landscape architects for design consistency.
5. Ensure all materials and finishes are in accordance with LMCC guidelines.

Page 14
8.0 Paving

8.1 Tactile Ground Surface Indicators

8.6 Drainage Grates
### 8.1 Tactile Ground Surface Indicators (TGSI)

**Example of bladed-shaft Hazard warning and directional warning systems installed at Charlestown Town Centre.**

<table>
<thead>
<tr>
<th>Type</th>
<th>Bladed-shaft hazard system. Bladed-shaft directional system.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Material</td>
<td>Thermoplastic polyurethane</td>
</tr>
<tr>
<td>Unit Dimensions</td>
<td>300mm/600mm strips x min. 10mm deep shaft</td>
</tr>
<tr>
<td>Colour</td>
<td>Black to meet luminance contrast requirements with surrounding ground plane.</td>
</tr>
<tr>
<td>Standard Drawing Reference</td>
<td>N/A -- refer to manufacturer’s installation details</td>
</tr>
</tbody>
</table>

**Positioning**

- Position in accordance with AS1428.4.1: Tactile Ground Surface Indicators
- Hazard or warning indicators to alert potential danger;
- Directional indicators to give directional orientation in open spaces where there are insufficient tactile directional cues (e.g., handrails or walls); to designate the route to avoid a hazard in the absence of existing tactile cues; and to give directional orientation where a person must deviate from the regular continuous accessible path of travel.
- Do not install TGSI unnecessarily, as they will not compensate for poor design. Good design practice (designing for clear paths of travel with delineated edges) should minimize the need for TGSI.

**Environmental Sustainability**

Street pavements occupy a large part of a town centres area, providing significant opportunities to contribute to sustainability outcomes. The TGSI specifications within these Technical Guidelines maximise durability to ensure a long service life with low maintenance requirements, therefore minimising the need to replace or re-install the indicators.

**Performance Criteria**

- Design and arrangement of TGSI must comply with AS1428.4.1.
- TGSI must be constructed from robust vandal and corrosion resistant materials.
- TGSI must be securely installed to prevent trip hazards, unauthorised removal or accidental removal by street-sweeping mechanical plant.

**Colour Contrast**

- Colour selections must match the luminance contrast against background and surrounding ground plane materials in accordance with AS1428.4.

**Slip Resistance**

- External walkways: P4 when tested in accordance with the wet pendulum test methods outlined in AS4586.
- R10 when tested in accordance with the oil-wet inclining platform test outlined in AS4586.

- External ramps: P5 when tested in accordance with the wet pendulum test methods outlined in AS4586.
- R11 when tested in accordance with the oil-wet inclining platform test outlined in AS4586.

**Relevant Standards and Codes**

- Austroads GUIDE TO ROAD DESIGN PART 6A: PEDESTRIAN AND CYCLIST PATHS
- AS1428 Part 4.1 Design for access and mobility: Means to assist the orientation of people with vision impairment—Tactile ground surface indicators
- AS4586: Slip resistance classification of new pedestrian surface materials

**Warranties**

Supply a warranty with Lake Macquarie City Council nominated as the warrantee for works in the public domain.

### 8.2 Pavement Markers

**Location**

- To delineate outdoor dining areas

**Position**

- In accordance with LMCC Footway Dining Procedure

**Type**

- Recessed Stainless steel discs with slip resistant profile.

**Dimensions**

- Nom. 50mm dia x 5mm thickness

**Material**

- 316 Marine grade stainless steel with milled finish.

**Installation**

- Drill and epoxy to finish flush with pavement surface at nominal 1.0m centres in accordance with suppliers instructions.

**Standard Drawing Reference**

- N/A
8.3 Concrete Pavement – Standard

Location  
To footways fronting all lots zoned B1 Neighbourhood Centres

Position  
• Main Body Paving  
• Kerb Ramps  
• Driveway crossings  
• Footway extensions  
• Kerb extensions

Finish  
Broomed finish

Standard Drawing  
• LSD-PAV-04 Utility Lid in pavement  
• EGSD-102 Kerb Ramps  
• EGSD-104 Commercial and Industrial Vehicle Driveway & Crossing.  
• EGSD-301- Concrete Footpath

References

8.4 Concrete Pavement – Standard – with Exposed Aggregates

Location  
To footways fronting all lots zoned B1 Neighbourhood Centres

Position  
• Corner pavement;  
• 800mm wide feature-strip;  
• 300mm wide feature-strip;  
• 300mm wide end-strip.

Decorative Aggregates  
A 50:50 mix of  
• 7-10mm Basalt  
• 7-10mm white quartz

Finish  
Medium exposure, using an abrasive blast technique, with larger particles of fine aggregate and some coarse aggregate exposed.

Standard Drawing  
• LSD-PAV-04 Utility Lid in pavement  
• EGSD-301- Concrete Footpath

References

Concrete Pavements and Kerb ramps - Guidance on design and specifying

Equal Access  
• Ensure flush transitions between concrete pavements and other surfaces. Cross falls shall be 1:40, consistent with AS1428.1  
• Vertical tolerances for paved surfaces on a continuous path of travel shall be +/- 3mm in accordance with AS1428.1

Environmental Sustainability  
Street pavements occupy a large part of a town centres area, providing significant opportunities to contribute to sustainability outcomes. The concrete pavement specifications within these Technical Guidelines and the Town Centre Palettes maximise durability to ensure a long service life with low maintenance requirements, therefore minimising the need to replace or re-instate pavements.

• Where appropriate, design pavement gradients to flow to mass planting, turf and tree pits.
• Concrete supplied is to use a Type GB blended cement with the highest amounts of fly ash/slag allowable under AS3972 to achieve the required concrete properties.

Performance Criteria  
Traffic Loads  
• Pavement design must be suitable for the expected traffic loads in relation to both strength and abrasion resistance.
• As a minimum, all town centre pedestrian pavements shall be designed to carry light traffic as vehicles may occasionally mount kerbs for maintenance, loading and unloading, special events etc.
• Design for heavier vehicle loads where heavy vehicles may traffic-adjacent driveways, residential flat buildings (for furniture deliveries etc.)

Slip Resistance
- For External walkways  
• P4 when tested in accordance with the wet pendulum test methods outlined in AS4586.
- For External ramps:  
• P5 when tested in accordance with the wet pendulum test methods outlined in AS4586.

Special finishes  
Coloured pavements shall be coloured with mineral oxide UV resistant colourants, achieved through either:
• An integral mix with specified aggregates added into the mix by the concrete supplier; or
• A 50:50 mix of coarse aggregate exposed.

Exposed aggregate pavements shall be achieved through either:
• An integral mix with specified aggregates added into the mix by the concrete supplier; or
• Mono-thic topping (topping thickness to be min. 50mm)

Finished path surfaces shall not deviate by more than 5mm on a 3m straight edge.

Tolerances  
• Special finishes require a minimum strength of 32MPa to meet abrasion resistance of finished surface.

Installation  
In accordance with Standard details below

Quality Assurance  
• Test Panels:  
  o Provide a single test panel for each type of special finish specified in the works. Non-critical areas of actual pavement to be used as test panels.
  o Test panel(s) shall be reinforced to the same specifications as the cast in situ concrete, and shall incorporate all relevant features of the surface, ie, joint, grooves, openings and corners.
  o Inspections, Council’s nominated Project Officer is to carry out the following inspections:
    o Review of Test Panels- acceptance based on uniformity of aggregate exposure, uniformity of colour, alignment of joints and dowels.
    o Sub-grade and sub-base prior to concrete slab being installed;
    o Reinforcement in place ready for concrete pour;
    o Finished concrete pavement;
  o Substitutions:
    o All proposed substitution of materials are to be approved in writing by Council’s Project Officer prior to the contractor placing orders.

Joints  
All joints to be continuous across the pavement.
• All joints to be sealed using high performance silicone or polyurethane joint sealant, applied when majority of dried shrinkage has occurred, and not applied during hot temperatures.
• Use clear or coloured sealants to match special concrete finishes.

Protection of surfaces  
Ensure adequate protection of finished surfaces and test panels during remaining completion of works.

Reinforcement in place ready for concrete pour;
• Protection of surfaces  
Where concrete pavements are damaged prior to completion of contract, the entire damaged panel will need to be replaced to eliminate patches and visual differences.

Relevant Standards, Codes and Technical guidance

### Pavers - Guidance on design and specifying

**Positioning**
- Generally continue pavers under surface mounted furniture items and cut pavers to finish up to the base of in-ground fixtures such as street signs, planter boxes and walls.
- Provide a 10mm mastic expansion joint around in-ground fixtures.

**Equal Access**
- Cross falls shall be 1:40, consistent with AS1428.1
- Ensure flush transitions between adjoining pavers and other surfaces.

**Environmental Sustainability**
- Street pavements occupy a large part of a town centres area, providing significant opportunities to contribute to sustainability outcomes. These paver specifications maximise durability to ensure a long service life with low maintenance requirements, therefore minimising the need to replace or re-instate pavements.
- Where appropriate, design pavement gradients to allow surface water to flow to mass planting, turf and tree pits.

**Paver Performance Criteria**

**Quality Assurance**
- Pavers shall be consistent with one another and samples.
- Submit the following details to Council’s nominated Project Officer:
  - details of the proposed paver supplier and a sample of each paver proposed for use.
  - Confirmation from supplier that the proposed pavers comply with the Performance Criteria specified in these guidelines, including slip resistance test results.

**Traffic Loads**
- Pavement design must be suitable for the expected traffic loads in relation to both strength and abrasion resistance. Definitions of Light vehicles and Commercial vehicles are in accordance with the CMAA Concrete Flag Pavement Design and Construction Guide as follows:
  - Light vehicles - vehicles that have a fully loaded weight less than 3 tonnes. As a minimum all town centre pavements and residential driveways are required to carry these loads.
  - Commercial vehicles - vehicles that have a gross weight of 3 tonnes or more. This category of pavement includes commercial driveways, footpaths subject to truck overrun or parking, pedestrian malls accepting service vehicles and lightly trafficked streets.

**Pavement application:**
- Minimum thickness of the paver shall be consistent with the information provided by the supplier that the proposed pavers comply with the Performance Criteria specified in these guidelines.

**Relevant Standards and Codes**
- AS1428 Design for Access and Mobility Suite
- AS4456 Masonry units and segmental pavers and flags Suite
- AS4586 Slip resistance classification of new pedestrian surface materials

**Warranties**
- Supply a warranty with Lake Macquarie City Council nominated as the warrantee for works in the public domain.
- Where appropriate, design pavement gradients to allow surface water to flow to mass planting, turf and tree pits.

**Paving Contractor Requirements**
- Have a fully loaded weight less than 3 tonnes.
- As a minimum all town centre pavements and residential driveways are required to carry these loads.
- Commercial vehicles - vehicles that have a gross weight of 3 tonnes or more. This category of pavement includes commercial driveways, footpaths subject to truck overrun or parking, pedestrian malls accepting service vehicles and lightly trafficked streets.

**Potential to effloresce**
- Nil to slight when tested in accordance with AS4456.6

**Mean Abrasion resistance**
- 3.5 when tested in accordance with AS4456.9

**Allowable Dimensional Deviations**
- Mean allowable dimensional deviation is +/- 1.5mm (plan) and +/- 2mm (height).
- The pavers shall be sufficiently flat to enable the units to be laid in a pavement to give a functional and aesthetically acceptable surface.

**Installation**
- In accordance with the referenced Landscape Standard Drawings.

**Quality Assurance**
- Submissions: The following must be submitted to Council’s nominated Project Officer prior to execution of the paving works:
  - Contractor’s licence in accordance with Paving Contractor Requirements below.
  - Confirmation that a ‘Plan of Survey Information’ has been submitted to the NSW Dept. of Land and Property Information.
  - Samples of proposed pavers for approval by Council’s nominated Project Officer prior to ordering project quantities.
  - Inspections: Council’s nominated Project Officer is to carry out the following inspections:
    - Sub-grade and sub-base prior to concrete slab being installed;
    - Reinforcement in place ready for concrete pour;
    - Concrete slab ready for laying;
    - Commencement of segmental paving;
    - Completion of segmental paving;
  - Paving Contractor Requirements: All paving work shall be undertaken/supervised by a Contractor with a current NSW Dept. of Fair Trading endorsed license in any of the following classes—Building, Structural Landscaping or Minor Trade-Paving.

**Tolerances**
- Maximum tolerance for deviations between adjoining pavers and with other surfaces shall be 2.5mm with a flatness deviation of 3mm using a 3m straight edge.

**Repairs**
- Repair broken pavers immediately.

**Protection of surfaces**
- Ensure adequate protection of finished surfaces during remaining completion of works.

**Relevant Standards and Codes**
- AS1428 Design for Access and Mobility Suite
- AS4456 Masonry units and segmental pavers and flags Suite
- AS4586 Slip resistance classification of new pedestrian surface materials

**Warranties**
- Supply a warranty with Lake Macquarie City Council nominated as the warrantee for works in the public domain.
8.6 Drainage Grates

Example of a drainage grate on a kerb extension appropriate for a Neighbourhood Centre

New Trees – Guidance on design and specifying

| Positioning | Consider potential conflict with driveway locations, building awnings and utility services locations and co-ordinate the lighting, architectural and landscape designs to eliminate conflict. |
| Council and other Government Authorities require clearances between street trees and other streetscape elements. Trees must be positioned to ensure mature canopy clearance: |
| Adequate clearances from Streetlights to achieve lighting design categories and subcategories. |
| 10m clearances from overhead power poles and lamp posts in accordance with Austroads Part 6B Section 3.3.4 - Landscaping Specific Situations. |
| 6m clearances from drainage sumps in accordance with Austroads Part 6B Section 3.3.4 - Landscaping Specific Situations. |
| 2.5m clearance from centre of kerb inlet pits. |
| Sightlines for vehicular traffic in accordance with LMCC standard details. |
| 3m clearances from edge of driveways. |
| For proposals to install street trees within the parking lane of a roadway, consult with Council’s Traffic Engineer to determine appropriate positioning and number of tree installations relevant to the site and extent of works. |

| Equal Access | There shall be 1800mm minimum accessible path of travel where the footpath adjoins building facades and property boundaries. |
| The accessible path of travel must have a vertical clearance of 2000mm in accordance with AS1428.1 and AS1428.2. |
| Mature tree canopies shall not encroach into this accessible path of travel. |

| Environmental Sustainability | The provision of street trees is an objective for development in both Business and Residential zones under the LMDCP2014. Suitably selected species with a sound structure provide many environmental benefits including urban amenity, microclimate, scenic quality, air and water quality, wildlife habitat, wind protection and social and psychological values. |

| Tree Quality | Specified trees must comply with AS2303- Part 2,Part 3 and Part 4. |

| Installation | Submissions: The following must be submitted to Council’s nominated Project Officer prior to execution of the planting works: |
| Contractor’s licences in accordance with Planting Contractor Requirements below; |
| Dispatch Tree Stock Inspection Checklists in accordance with AS2303-2015 Appendix C - Example A confirming trees meet performance criteria listed above; |
| Certification that soils (including filter material and structural soils) comply with the approved project documentation. |
| Planting Contractor Requirements - All tree planting work shall be undertaken/supervised by a Contractor with a current NSW Dept. of Fair Trading endorsed licence in the following class: Structural Landscaping. |
| Inspections: Inspections must be carried out by Council’s nominated Project Officer at the following points: |
| Set out of tree pits complete, prior to excavation; |
| Tree pits excavated; |
| Root barrier installed; |
| Structural soils/permeable paving base courses installed; |
| Trees delivered to site and ready for planting; |
| Completion of planting. |

| Relevant Standards and Codes | LMCC Landscape Design Guidelines |
| AS2303- Tree Stock for Landscape Use |
| Austroads GUIDE TO ROAD DESIGN PART 6A – Pedestrian and Cyclist Paths |
| Austroads GUIDE TO ROAD DESIGN PART 6B – Roadside Environment |
| AS1428 Design for access and mobility Suite |

| Maintenance and Establishment | Refer to LMCC DCP 2014 for Maintenance and Establishment periods for different zonings. If not designated in the DCP, the maintenance and establishment period shall be 52 weeks from installation of trees unless otherwise noted in conditions of consent. |
| Refer to the LMCC Landscape Design Guidelines for checklist requirements during the plant establishment and contract maintenance periods. |
| Refer to LSD-SPEC-01 Tree Planting Specification for details of maintenance and establishment tasks. |
9.3 Tree Guard

<table>
<thead>
<tr>
<th>Location</th>
<th>To all new street tree installations in footways fronting lots zoned B1 Neighbourhood Centres</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
</tbody>
</table>

Tree Guard – Guidance on design and specifying

| Positioning | • Provide setbacks from face of kerb in accordance with the referenced standard details to minimise conflict with opening car doors.  
• Consider impacts tree guards will have on pedestrian and vehicle traffic sight lines, and adjust tree locations accordingly. |
| Equal Access | • There shall be 1800mm minimum accessible path of travel where the footpath adjoins building facades and property boundaries.  
• The accessible path of travel must have a vertical clearance of 2000mm in accordance with AS1428.1 and AS1428.2  
• Tree guards shall not encroach into this accessible path of travel. |
| Environmental Sustainability | • Tree guard design maximises durability and life span, specifying robust vandal and corrosion resistant materials.  
• Tree guard design provides fixings and materials junctions that provide removal and re-use options for infill panels and decorative elements. |
| Relevant Standards and Codes | • AS1428 Design for Access and Mobility Suite  
• AS1604.1Specification for preservative treatment - sawn and round timber |
10.0 Light poles and banners

10.1 Street lighting

10.2 Pedestrian lighting

There are no selections for street lighting or pedestrian lighting. If required, submit a proposal to Council for approval that meets the standard performance specifications contained in this document.
Guidance on design and specifying

10.1 Street Lighting

- Locate Street lighting in accordance with Council’s Public Lighting Policy.
- Additional lighting may be necessary at certain locations such as pedestrian facilities.

Positioning

- In accordance with Ausgrid Network Standard NS167 Positioning of Poles and Lighting Columns.
- In accordance with Ausgrid Network Standard NS128 Specification for Pole Installation and removal.
- In accordance with LMCC Standard Drawing EGD3-303 Footway allocation utility services and trees.
- Consider potential conflict with building awnings and street tree locations and coordinate the lighting, architectural, and landscape designs to eliminate conflict.

Equal Access

- There shall be 1800mm minimum accessible path of travel where the footpath adjoins building facades and property boundaries.
- The accessible path of travel must have a vertical clearance of 2000mm in accordance with AS1428.1. and AS1428.2.
- Street lighting shall not encroach into accessible paths of travel.

Digital Connectivity

- Consider where digital technology is appropriate to the function of a space.
- Generally this will be located in public domain plazas, nodes and key places where benefit will be derived from smart technology.
- Locate and provide in accordance with Lake Macquarie: The Smart City Guidelines for Integrating Emerging Technology into the Built Environment.
- Consider where digital technology is appropriate to the function of a space. Generally this will be located in public domain plazas, nodes and key places where benefit will be derived from smart technology.
- Locate and provide in accordance with Lake Macquarie: The Smart City Guidelines for Integrating Emerging Technology into the Built Environment.

Environmental Sustainability

- Council aims to reduce energy consumption and eliminate unnecessary energy use by installing lights to locations outlined in the LMCC Public Lighting Policy, to the level required to meet the applicable lighting category.
- Poles and luminaries should be made from robust materials, and designed to minimise corrosion and vandalism opportunities.
- Street lighting shall not encroach into accessible paths of travel.
- There shall be 1800mm minimum accessible path of travel where the footpath adjoins building facades and property boundaries.
- The accessible path of travel must have a vertical clearance of 2000mm in accordance with AS1428.1. and AS1428.2.
- Street lighting shall not encroach into accessible paths of travel.

Performance Criteria

- Must meet the requirements of the AS1158 Suite to provide the required lighting category and sub category. Consult with Council’s Infrastructure Strategy Technical Officer to determine the appropriate Sub- category.
- Minimise energy consumption by utilising energy efficient light fixtures such as LED’s.
- Energy absorbing or rigid poles are not recommended for pedestrian areas.
- Consider two function poles with a modular design to allow future digital augmentation and connectivity.
- Shall be fabricated from robust materials fit for purpose.
- Finishes on all materials to maximise corrosion resistance suitable to the intended light location.

Fabrication and Installation

- Must meet the requirements of the relevant Australian standards.
- Must meet energy provider requirements and road authority requirements.
- Affix a label identifying the pole owner in accordance with the NSW Service and Installation Rules 3.7.2.2 Labelling of Private Posts/Poles.

Relevant Standards and Codes

- AS1158 Suite - Lighting for Roads and Public Spaces
- AS1798 Lighting Poles and Bracket arms- recommended dimensions
- AS/NSZ 3000: Electrical Installations
- LMCC Public Lighting Policy
- LMCC Public Lighting Guidelines
- Lake Macquarie: The Smart City Guidelines for Integrating Emerging Technology into the Built Environment.
- RMS Model Drawings Street Lighting(R72)
- Ausgrid Network Standard NS119 STREET LIGHTING DESIGN AND CONSTRUCTION

10.2 Pedestrian Lighting

- Locate Pedestrian lighting in accordance with Council’s Public Lighting Policy.

Positioning

- Consider potential conflict with building awnings and street tree locations and co-ordinate the lighting, architectural and landscape designs to eliminate conflict.
- For pole mounted lights:
  - In accordance with Ausgrid Network Standard NS167 Positioning of Poles and Lighting Columns.
  - In accordance with Ausgrid Network Standard NS128 Specification for Pole Installation and removal.
- For awning mounted:
  - Position as required to achieve required lighting category.
  - Position to ensure required clearances from utility services, clear paths of travel and signage.

Equal Access

- There shall be 1800mm minimum accessible path of travel where the footpath adjoins building facades and property boundaries.
- The accessible path of travel must have a vertical clearance of 2000mm in accordance with AS1428.1. and AS1428.2.

Digital Connectivity

- Consider where digital technology is appropriate to the function of a space. Generally this will be located in public domain plazas, nodes and key places where benefit will be derived from smart technology.
- Locate and provide in accordance with Lake Macquarie: The Smart City Guidelines for Integrating Emerging Technology into the Built Environment.

Performance Criteria

- Must meet the requirements of the AS1158 Suite to provide the required lighting category and sub category. Consult with Council’s Infrastructure Strategy Technical Officer to determine the appropriate Sub- category.
- Minimise energy consumption by utilising energy efficient light fixtures such as LED fittings.
- Energy absorbing or rigid poles are preferred. Slip base frangible poles are not recommended for pedestrian areas.
- Consider multi-function poles with a modular design to allow future digital augmentation and connectivity.
- Shall be fabricated from robust materials fit for purpose.
- Finishes on all materials to maximise corrosion resistance suitable to the intended light location.

Fabrication and Installation

- Must meet the requirements of the relevant Australian standards.
- For lighting poles - affix a label identifying the pole owner in accordance with the NSW Service and Installation Rules 3.7.2.2 Labelling of Private Posts/Poles.
- Must meet energy provider requirements and road authority requirements.

Relevant Standards and Codes

11.0 Furniture

| 11.1 Bike Racks | 26 |
| 11.2 Bollards   | 27 |
| 11.3 Drinking Fountains | 28 |
| 11.4 Waste Receptacles | 29 |
| 11.5 Seats      | 30 |
11.1 Bike Racks

Performance Criteria
- Shall be structurally capable of supporting a bicycle and resistant to cutting, bending or breaking.
- Surface mount to pavement. Fixings used shall be secure and not easily removed with ordinary tools.
- Shall provide safe and secure access with regard to both the user and the bicycle itself.
- Shall be constructed from materials, and/or have finishes and coatings, that provide ease of cleaning and graffiti removal.

Material
- Constructed from Grade 304 Stainless Steel pipe

Finish
- Electro polished, max surface roughness <5microns.

Shape
- Circular hoop shape

Dimension
- Nom. 950 x 800mm
Bike rack dimensions shall allow locking the frame and both wheels of a bicycle to the bike racks by chain, cable or U-lock without removal of a wheel from the bicycle.

Standard Drawing Reference
- LSD-BKR-01 – Bike Racks (Typical)

Bike Racks – Guidance on design and specifying

Location
- Locate as identified in the Streetscape Master Plans.
- All bicycle parking should be accessible from a road, or bicycle-friendly access path, away from the desired walking line of pedestrians and as close as possible to the cyclist’s destination.
- Provide bike racks at destinations such as:
  - near main entries to buildings and retail spaces;
  - in proximity dining and entertainment venues;
  - at gathering places and open spaces.

Positioning
- Allow sufficient clearance - min. 2250 from centreline of racks to wall/property boundary – to maintain clear paths of travel for circulation around the rack installation, including for maintenance cleaning.
- Racks may be oriented parallel to the kerb or at an angle of 45-90 degrees from the kerb alignment depending on the available footpath width and accessible path of travel requirements.
- Set-out and spacing of racks must be in accordance with Australian Standards for bicycle parking. AS 2890.3, including offsets from back of kerb to avoid damage to parked bicycles from opening car doors.
- Consider potential conflict with driveway locations, utility services locations and co-ordinate the lighting, engineering, architectural and landscape designs to eliminate conflict.

Equal Access
- There shall be 1800mm minimum accessible path of travel where the footpath adjoins building facades and property boundaries. Bike racks with parked bicycles shall not encroach into this accessible path.
- Bike racks installed adjacent to public access ways should provide a minimum 30% colour contrast to the background pavement, wall, fence or vertical surface to enhance detection by people with low vision.
- Bike racks located in public domain plazas should not be placed where pedestrians could be expected to walk, on desire lines or in areas of heavy pedestrian traffic. If the racks are not set back from primary pedestrian access ways then hazard warning tactile ground surface indicators should be installed, in accordance with AS 1428.4.1.

Digital Connectivity
- Consider where digital technology is appropriate to the function of a space. Generally this will be located in public domain plazas, nodes and key places where benefit will be derived from smart technology.
- Locate and provide in accordance with Lake Macquarie: The Smart City Guidelines for Integrating Emerging Technology into the Built Environment.

Environmental Sustainability
- Provision of secure, convenient bicycle parking facilities support the uptake of active transport within the City, which is a target in the City Of Lake Macquarie Environmental Sustainability Action Plan 2014-23.
- Installation of products to enable re-location and re-use.

Installation
- Surface mount to minimise damage to pavements if replacement or relocation is required.
- Use nylon grommets/sleeves at junctions between stainless steel and other metallic materials to prevent galvanic corrosion.
- Consult product supplier to determine suitable fixing and footing requirements.
- Fixing and footings for custom elements require sign off by the project’s Engineer.

Relevant Standards and Codes
- AS2890.3 - Bicycle Parking
- AS1428 Design for Access and mobility Suite
- Lake Macquarie: The Smart City Guidelines for Integrating Emerging Technology into the Built Environment.
11.2 Bollard

Examples of suitable bollard types

<table>
<thead>
<tr>
<th>Dimension</th>
<th>Nom. 1000mm h x 170mm diameter</th>
</tr>
</thead>
</table>
| Installation | • Surface mount to minimise damage to pavements if replacement or relocation is required.  
• Consult product supplier to determine suitable fixing and footing requirements. |
| Standard Drawing Reference | N/A |

Bollards – Guidance on design and specifying

**Location**
- Locate to prevent and deter vehicle access to prevent damage to pavements, for example, at building entries – particularly residential buildings where furniture trucks may pull up and where pavements are not designed for heavier loadings.
- May be used to protect vegetation from vehicles, especially associated with shared zone or car park areas.
- **Note:** surface mounted bollards are not intended to protect crowded places from hostile vehicle attack. Refer to ‘Hostile Vehicle Guidelines for Crowded Places’ published by the Commonwealth Attorney-General’s Department for guidance on design considerations to minimise damage from hostile vehicle attack.

**Positioning**
- Offset bollards 800mm from the front face of kerbs and edges of vehicle parking lanes to avoid risk of damage from opening car doors.
- Provide sufficient clearance to maintain accessible paths of travel and circulation around the bollard installation, including for maintenance cleaning.
- Where used to prevent vehicle access, space at maximum 1500mm centres.

**Equal Access**
- There shall be 1800mm minimum accessible path of travel where the footpath adjoins building facades and property boundaries. Bollards shall not encroach into this accessible path.
- Bollards installed adjacent to public access ways should provide a minimum 30% colour contrast to the background pavement, wall, fence or vertical surface to enhance detection by people with low vision;
- Bollards located in public domain plazas should not be placed where pedestrians could be expected to walk, on desire lines or in areas of heavy pedestrian traffic. If the bollards are not set back from primary pedestrian access ways then hazard warning tactile ground surface indicators should be installed, in accordance with AS 1428.4.1.

**Digital Connectivity**
- Consider where digital technology is appropriate to the function of a space. Generally this will be located in public domain plazas, nodes and key places where benefit will be derived from smart technology.
- Locate and provide in accordance with LMCC Guidelines for Emerging Technology

**Environmental Sustainability**
- Bollard serviceable life span should be maximised through:  
  o design to minimise corrosion and vandalism opportunities;  
  o construction from robust materials;  
  o Installation in accordance with approved project documentation.  
  o Installation to enable re-location and re-use.

**Performance Criteria**
- Shall be constructed from robust materials fit for purpose.
- Shall be constructed from materials, and/or have finishes and coatings, that provide ease of cleaning and graffiti removal.
- Finishes on all materials to maximise corrosion resistance suitable to the intended bollard location.
- Removable, fold-down or mechanically actuated retractable bollards may be required depending on the situation and/or lease arrangements.
- Minimum 1000mm high x 100-300mm internal diameter.
- Fixings used shall be secure and not easily removed with ordinary tools. Use nylon grommets/sleeves at junctions between stainless steel and other metallic materials to prevent galvanic corrosion.
- Provide a securely fitted cap fabricated from the same material as the bollard.

**Relevant Standards and Codes**
- Austroads GUIDE TO ROAD DESIGN PART 6B: ROADSIDE ENVIRONMENT
- Austroads GUIDE TO ROAD DESIGN PART 6A: PEDESTRIAN AND CYCLIST PATHS
- AS1428 Design for Access and Mobility Suite
- NSW Bicycle Guidelines (RTA,2005)
- ‘Hostile Vehicle Guidelines for Crowded Places’ published by the Commonwealth Attorney-General’s Department
- Lake Macquarie: The Smart City Guidelines for Integrating Technology into the Built Environment.
11.3 Drinking Fountains

- Locate as identified in the Streetscape Master Plan.
- Consider whether a drinking fountain is appropriate to the function of a space. Generally will be located to open spaces and public domain plaza's where groups of people may gather, and where urban activities such as performance, parcoux and skating may occur.

- Provide adequate circulation space around the fixture for wheelchair access and pedestrian movement.
- If located adjacent vehicle parking areas, position drinking fountains with sufficient clearances from the face of kerb (min 800mm) to avoid risk of damage from car doors.
- Consider potential conflict with driveway locations, building awnings and utility services locations and co-ordinate the lighting, engineering, architectural and landscape designs to eliminate conflict.
- Allow sufficient clearance to maintain clear paths of travel for circulation around the fountain installation, including for maintenance cleaning.

- Fountain dimensions and requirements shall meet the criteria outlined in AS1428.2 – Section 27.3. 
- Provide hard paving and smooth transitions for wheelchair access.
- There shall be 1800mm minimum accessible path of travel where the footpath adjoins building facades and property boundaries. Fountains shall not encroach into this accessible path.
- Fountains located in public domain plazas should not be placed where pedestrians could be expected to walk, on desire lines or in areas of heavy pedestrian traffic. If the fountains are not set back from primary pedestrian access ways then hazard warning tactile ground surface indicators should be installed, in accordance with AS 1428.4.1.
- Fountains installed adjacent to public access ways they should provide a minimum 30% colour contrast to the background pavement, wall, fence or vertical surface to enhance detection by people with low vision.
- Inclusion of dog bowls are preferred to support assistance animals.

- Consider where digital technology is appropriate to the function of a space. Generally this will be located in public domain plazas, nodes and key places where benefit will be derived from smart technology.
- Locate and provide in accordance with Lake Macquarie: The Smart City Guidelines for Integrating Emerging Technology into the Built Environment.

- Consider on site water infiltration as an alternative to sewer drainage.
- Maximise serviceable life span through the performance criteria listed below.
- Inclusion of water bottle refill taps is preferred to reduce waste from single use plastic bottles.

- Shall be constructed from robust materials fit for purpose.
- Materials and finishes selected to maximise corrosion resistance suitable to the intended fountain location.
- Materials and finishes selected to facilitate graffiti removal and minimise maintenance burdens - Stainless Steel must have an electro-polished or mirror finish to minimise tea staining.
- Attractive aesthetic design
- Accessible, refer to Equal Access requirements above.

- Tap option desirable (consider options for water collection under taps)
- Allowing Water Bottle refill
- Slim design provides less options for graffiti
- Options for signage to the rear of fountain. Can be linked to council, chambers, sustainability, way finding.
- Drainage options – drainage pipe connection or on site water disposal.
- Dog bowl option desirable for flexibility at carefully selected & council approved locations - likely to be less essential in paved areas.

- Install on ground with a maximum gradient of 1 in 50. For sloping sites, design level pads to accommodate custom elements.
- Fixing and footings for custom elements require sign off by the project’s Engineer.
- Install in accordance with the manufacturer’s recommendations.
- Connect to potable water supply.
- Drain to sewer if infiltration not feasible.

- Austroads GUIDE TO ROAD DESIGN PART 6A: PEDESTRIAN AND CYCLIST PATHS
- AS1428 Design for Access and Mobility Suite
- Lake Macquarie: The Smart City Guidelines for Integrating Emerging Technology into the Built Environment.

- Provide warranty with LMCC as Warranty.
11.4 Waste Receptacles

**Product**
- Gossi Park Bayside bin or approved equivalent.

**Performance criteria**
- Anodised aluminium enclosure with sealed base/self-extinguishing design
- Slam door latch and triangular drive shaft lock system
- Fixed hood for waste enclosure
- Fixed hood with restrictor for recycling enclosures

**Standard Drawing Reference**
- LSD-BIN-01 Bin Enclosure

**Waste Receptacles - Guidance on design and specifying**

**Location**
- Locate as identified in the Streetscape Master Plans.
- Select locations where there is potential to generate rubbish, e.g., bus stops, food outlets, open spaces and public plaza’s.
- Consider the ease of servicing bin locations when determine bin locations within a street.

**Positioning**
- If located adjacent vehicle parking areas, position receptacles with sufficient clearances (min 800mm) from the face of kerb to avoid risk of damage from car doors.
- Orient bins so that the access door does not open towards the roadway.
- Consider potential conflict with driveway locations, building awnings and utility services locations and co-ordinate the lighting, engineering, architectural and landscape designs to eliminate conflict.
- Allow sufficient clearance to maintain clear paths of travel for circulation around the receptacle installation, including for maintenance cleaning.

**Equal Access**
- There shall be 1800mm minimum accessible path of travel where the footpath adjoins building facades and property boundaries. Waste receptacles shall not encroach into this accessible path.
- Waste Receptacles located in public domain plazas should not be placed where pedestrians could be expected to walk, on desire lines or in areas of heavy pedestrian traffic. If waste receptacles are not set back from primary pedestrian access ways then hazard warning tactile ground surface indicators should be installed, in accordance with AS 1428.4.1.

**Digital Connectivity**
- Consider where digital technology is appropriate to the function of a space. Generally this will be located in public domain plazas, nodes and key places where benefit will be derived from smart technology.
- Locate and provide in accordance with Lake Macquarie: The Smart City Guidelines for Integrating Emerging Technology into the Built Environment.

**Environmental Sustainability**
- Streetscape improvements provide the opportunity to deliver best practice waste management for public spaces.
- Planning and design should address practical collection sites and space suitable for separation of general waste, commingled recyclables and problem recyclables.
- Waste receptacles serviceable life span should be maximised through:
  - Design to minimise corrosion and vandalism opportunities;
  - Construction from robust materials;
  - Installation in accordance with approved project documentation.

**Installation**
- Install in accordance with the manufacturer’s recommendations.
- Provide a 240 Litre mobile garbage bin at same time as enclosure installation.
- Refer to LSD-BIN-01 – Bin Enclosure

**Relevant Standards and Codes**
- Austroads GUIDE TO ROAD DESIGN PART 6B: ROADSIDE ENVIRONMENT
- Austroads GUIDE TO ROAD DESIGN PART 6A: PEDESTRIAN AND CYCLIST PATHS
- AS1428 Design for Access and Mobility Suite
- Lake Macquarie: The Smart City Guidelines for Integrating Emerging Technology into the Built Environment.

**Warranties**
- Provide warranty with LMCC as Warrantee.
11.5 Seat

Examples of seats appropriate for neighbourhood town centres.

<table>
<thead>
<tr>
<th>Location</th>
<th>Generally provide seats at focal nodes, bus stops or where it may be reasonably expected that the public may wish to rest or wait.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Type</td>
<td>Seat with backrest and armrests to both ends.</td>
</tr>
</tbody>
</table>
| Materials      | • Cast aluminium frame in marine grade (6061) aluminium.  
|                | • Extruded aluminium slats, smooth profile with an anodised finish suitable for a marine environment.  
|                | • Clear anodised finish. Silver powder coat finish.  
|                | • Other colours may be proposed for Council acceptance if desirable for the design outcome and landscape context. |
| Colour         |                                                                                                              |
| Installation   | Surface mount in accordance with suppliers specifications.                                                   |
| Standard Drawing Reference | N/A                                        |
| Warranties     | Provide warranty with LMCC as Warrantee.                                                                  |

**Seats - Guidance on design and specifying**

| Positioning                  | • If located adjacent vehicle parking areas, position seats with sufficient clearances to avoid conflict with opening car doors.  
|                             | • Typically orient seats to be parallel to the kerb.  
|                             | • Ensure there is a minimum 500mm clearance between the edge of the seat and any accessible path of travel.  
|                             | • In areas of high use by people with ambulatory disabilities, such as areas frequented by elderly people, provide seats compliant with AS1428.2 at no more than 60 m apart alongside paths of travel.  
|                             | • On sloping sites, design level pads to accommodate seating  
|                             | • Allow sufficient clearance to maintain clear paths of travel for circulation around the seat installation, including for maintenance cleaning. |
| Equal Access                | • A variety of seating options should be provided in Town Centres to cater for people of varied abilities. Where a variety of seating is proposed, ensure a minimum of one seating option complies with the requirements of AS1428.2 – Design for Access and Mobility.  
|                             | • There shall be 1800mm minimum accessible path of travel where the footpath adjoins building facades and property boundaries. Ensure seats – including leg room when seats are occupied - does not encroach into this accessible path of travel.  
|                             | • Seats installed adjacent to public access ways they should provide a minimum 30% colour contrast to the background pavement, wall, fence or vertical surface to enhance detection by people with low vision.  
|                             | • Seats located in public domain plazas should not be placed where pedestrians could be expected to walk, on desire lines or in areas of heavy pedestrian traffic. If the seats are not set back from primary pedestrian access ways then hazard warning tactile ground surface indicators should be installed, in accordance with AS 1428.4.1. |
| Digital Connectivity        | • Consider where digital technology is appropriate to the function of a space. Generally this will be located in public domain plazas, nodes and key places where benefit will be derived from smart technology.  
|                             | • Locate and provide in accordance with Lake Macquarie: The Smart City Guidelines for Integrating Emerging Technology into the Built Environment. |
| Environmental Sustainability | • The serviceable life span of public seating should be maximised through:  
|                             | o design to minimise corrosion and vandalism opportunities;  
|                             | o construction from robust materials;  
|                             | o Installation in accordance with approved project documentation.  
|                             | o Installation to enable product re-location and re-use. |
| Performance Criteria        | • Shall be constructed from robust materials fit for purpose.  
|                             | • Shall be constructed from materials, and/or have finishes and coatings, that provide ease of cleaning and graffiti removal.  
|                             | • Shall be free from sharp edges and projections.  
|                             | • The height of seats to be in the range of 400 - 500mm above the finished pavement level.  
|                             | • The width of the bench from edge of seat to front of backrest is to be in the range of 400-450mm.  
|                             | • Provide armrests to both ends of seat. The height of armrests above the seat to be in the range of 220-300mm. |

13.0 Town Centre Catchments for Neighbourhood Centres

A colour palette has been created for each of the major town centres. The purpose of this is to establish a unique look and feel at such locations whilst helping strengthen the branding and recognition of the city.

Neighbourhood Centres within town centre catchment areas can use their Town Centre colour e.g. Jewells may choose to use Belmont’s colour.

Environment design textures have been created to represent the three natural environments that are associated with Lake Macquarie City. These graphic elements can be applied to custom elements within the Neighbourhood centres to give a design personality and connect to sense of place.
